OUR EXPERIENCE - YOUR SAFETY

PERFORMANCE FROM START TO FINISH

When nothing but the best is good enough, BÖHMER district heating ball valves perform to meet the most demanding requirements. Especially for underground operation a service life of at least 30 years is absolutely necessary for operational safety. Thanks to the design of our ball seal system, district heating ball valves from our factories are the perfect solution, not least because they require no maintenance.

These district heating ball valves can be deployed for numerous applications. Regardless of whether for underground district heating systems, transfer stations or in-house piping – BÖHMER district heating ball valves ensure such a high level of operational safety that they are almost indispensable.

Decades of experience mean that BÖHMER GmbH stands for top product quality. Our ball valves are certified according to current standards and regulations and they ensure extremely low losses of pressure.

EXPERIENCE, EXPERTISE, PERFORMANCE. WE ARE BÖHMER!

We have been a reliable ball valve manufacturer since 1956. More than 300 highly-qualified employees and modern machinery are the components of our success.

The structure of our plant and equipment, as well as our production, which is based on the most modern economic and ecological requirements, guarantee our customers maximum performance, quality and cost-effectiveness.

Decades of research and development enable us to manufacture a wide variety of ball valves for diverse applications. Thanks to our modular design system, we can always react flexibly to market needs. Needless to say, we offer special designs for individual customer requirements.

Branch factory in Hattingen

Main factory in Sprockhövel

Branch factory in Kunshan, China

Branch factory in Karaganda, Kazakhstan

Today we are proud to have facilities located on 23,000 m² of production and administration floor-space in our main factory and 13,500 m² in our branch factory in Hattingen.

Furthermore, we run two manufacturing facilities outside of Europe. The Asian market is served by our factory in China and our factory in Kazakhstan delivers to that local market.

Our large warehousing capacity enables us to meet even short-term deadlines. On-time deliveries are standard for us.

Our regular customers are demanding and therefore appreciate our first-class service. They have relied on the quality and reliability of BÖHMER ball valves for decades. We are proud to be recognized as one of the leading valve manufacturers.

THE BÖHMER PRODUCT LINE

Our ball valves set standards because our products are designed for the most demanding conditions. The various applications for which our ball valves were designed require maximum durability and performance.

Generally our ball valves can be used wherever gases, liquids and solids are transported. It goes without saying that our ball valves fulfill all requirements for certification and procedure approvals.

We can transport all media without difficulty up to the nominal size DN1400, even with pressures of up to 500 bar.

The standards that our ball valves now fulfill are the highest on the market. But we go a step further. Our team of highly-qualified engineers and designers takes special care to further develop our ball valves with maximum quality of design and material as well as cost-effectiveness.

TEN ARGUMENTS IN FAVOUR OF BÖHMER BALL VALVES FOR DISTRICT HEATING

We know that our products deliver what they promise. To give you an idea of the numerous advantages of our ball valves, we have compiled the following list of some of the special features.

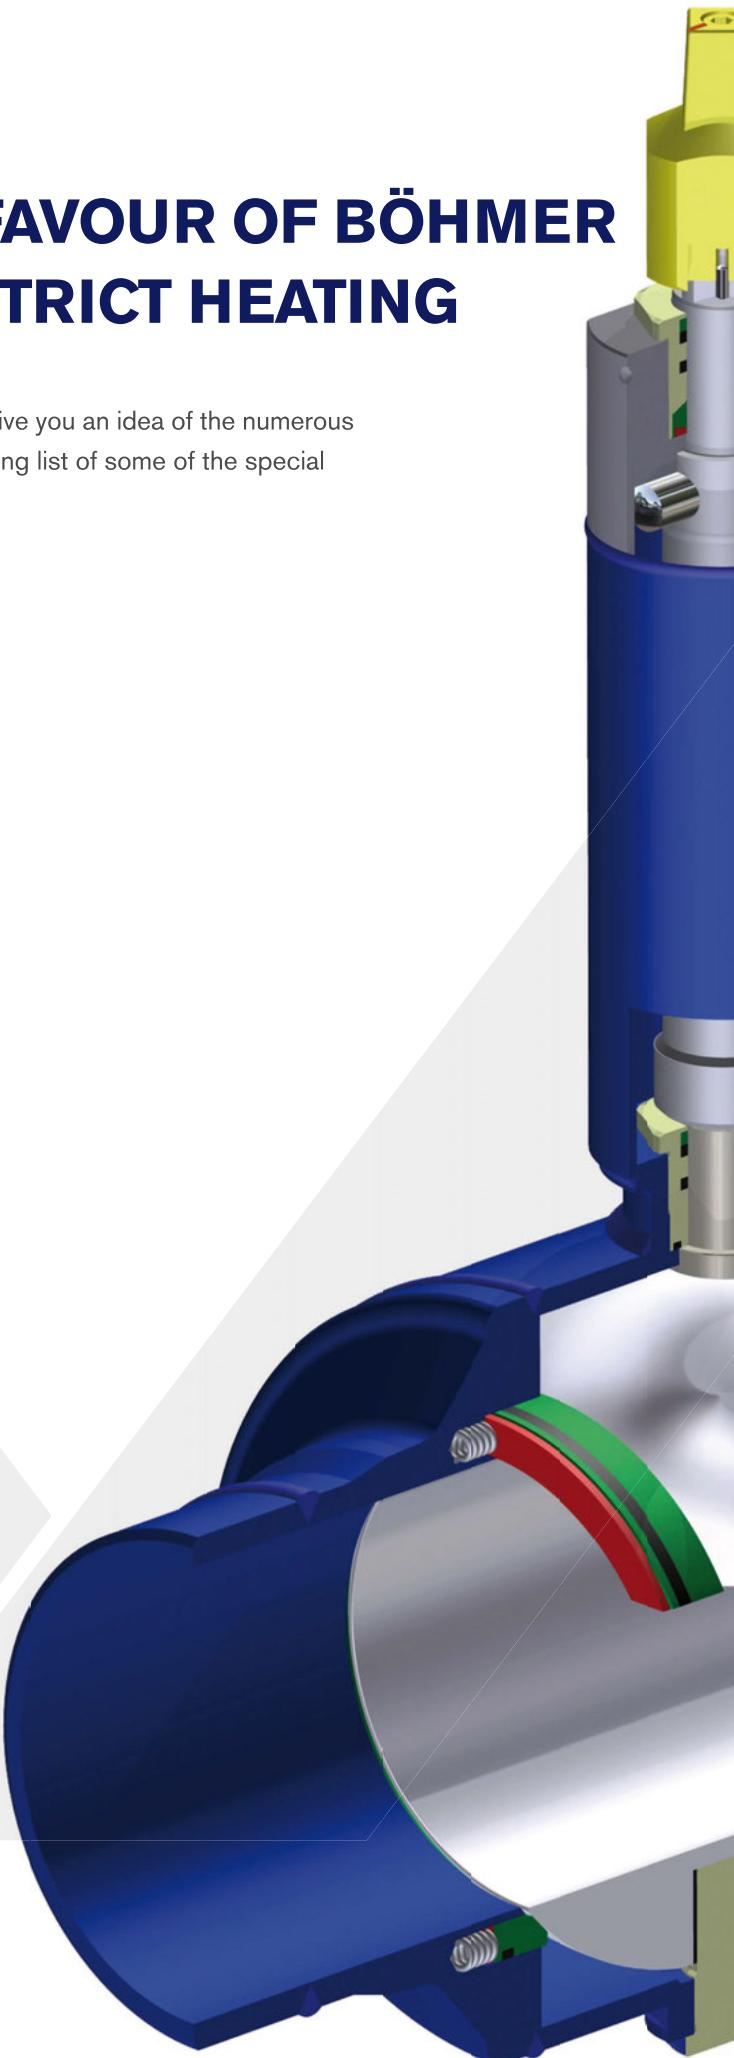

01 The solid **body components** ensure the highest level of operational safety even under extreme conditions.

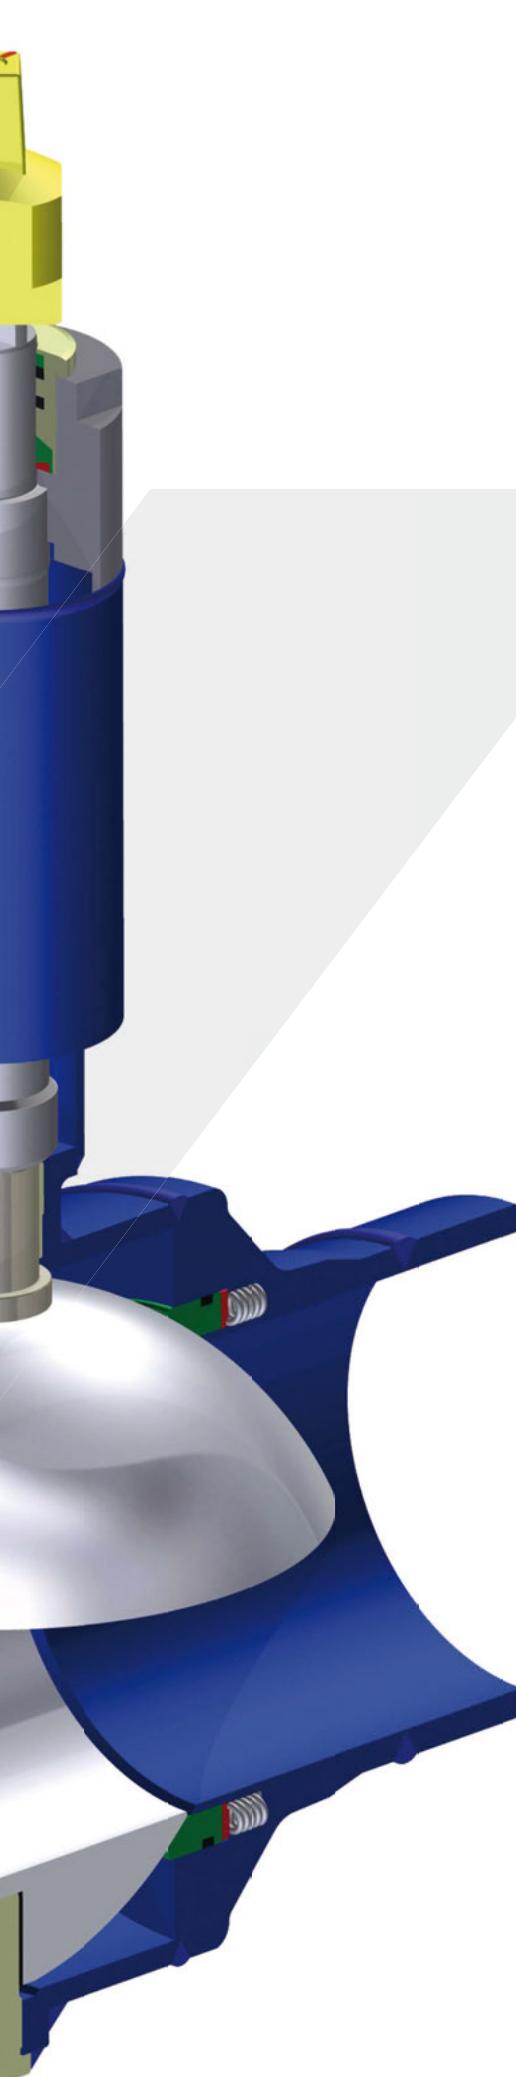

02 The full **penetration of the weld** **seams** enables our ball valves to withstand even extreme stresses, thus ensuring safe operation of the valves.

03 The **elongated weld ends** fulfill more than the required standard, while machining operations ensure absolute roundness of the weld ends.

04 The **spring-supported ball seals** ensure longer service life and constitute the basis for fulfilling double block and bleed requirements.

05 The **trunnion-mounted ball** increases the service life of the valve by reducing stresses.

06 The **solid ball** ensures top operational safety without the loss of flow.

07 The **separation of the bonnet** from the flow of hot water / steam reduces the thermal stress on the insulation.

08 The **enclosed limit stop** is not exposed to dirt and thus ensures exact positioning of the valve in its end positions.

09 The **BÖHMER position indicator** is designed with a two-flat header and a red-colored direction notch showing the exact position of the ball even after assembly of BÖHMER accessories.

10 The **redundant seal of the stem** ensures absolutely hermetic seal-off from the environment.

THE BÖHMER DISTRICT HEATING PROGRAM

Thanks to our comprehensive product portfolio, we are able to fulfill almost all customer demands and requests. In contrast to other manufacturers, we manufacture all our district heating ball valves according to a modular system which has proved its worth for decades, regardless of whether the ball valve is destined for pre-insulated underground installation or for above-ground installation.

Our district heating ball valves are certified according to international standards currently in force throughout the world and they excel in their minimum loss of pressure and high operational safety.

TECHNICAL INFORMATION FOR BÖHMER DISTRICT HEATING BALL VALVES

Wall thicknesses for ball valves for underground installation

The pipe ends listed on pages 16 to 21 used for BÖHMER district heating ball valves for underground installation meet the requirements of the AD technical bulletin ("Merkblatt") B9 for extruding of pipes. Extrusion can be executed on the pipe ends for drain

and ventilation lines without falling short of the minimum wall thickness requirements according to EN488. The following wall thicknesses are of the pipe material used. These thicknesses are machined at the weld joint to suit the adjoining wall thickness.

DN	20	25	32	40	50
Pipe dimensions	26,9 x 3,2	33,7 x 3,2	42,4 x 3,2	48,3 x 3,6	60,3 x 3,6
DN	65	80	100	125	150
Pipe dimensions	76,1 x 4,0	88,9 x 4,5	114,3 x 4,5	139,7 x 4,5	168,3 x 5,0
DN	200	250	300	350	400
Pipe dimensions	219,1 x 6,3	273,0 x 7,1	323,9 x 8,0	355,6 x 8,0	406,4 x 8,8

Dimensions of the flange connections

All ball valves in this catalogue meet the Standard for Flange Connections EN1092.

The following table shows a summary of the flange connection dimensions for pressure levels PN10 – PN40

which, for reasons of clarity, are not listed in the data sheets. For production reasons, the thickness of the flanges can be larger than the dimension required by the standard.

DN	PN10	PN16	PN25	PN40	D	g	K	b	z	d
10	X	X	X	X	90	40	60	16	4	14
15	X	X	X	X	95	45	65	16	4	14
20	X	X	X	X	105	58	75	18	4	14
25	X	X	X	X	115	68	85	18	4	14
32	X	X	X	X	140	78	100	18	4	18
40	X	X	X	X	150	88	110	18	4	18

PRODUCTS & DATA

Ball Valve with Weld Ends for underground installation

BBF/KSF-V-HE, DN 20-125, PN 25

Full Bore

Standard Materials:

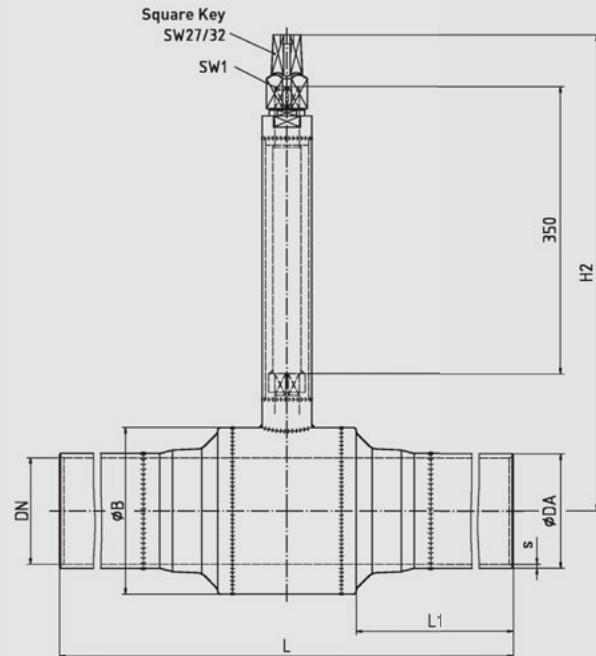

Body:	Forged Steel / Steel
Ball:	Stainless Steel
Stem:	Stainless Steel
Ball seals:	PTFE
Stem seals:	EPDM

Operating Temperature: up to +150 °C

**Ball Valves fulfill the requirements of EN 488
and are suitable for the cold laying method**

Design Features:

- From DN125 a trunnion mounted ball is standard.
- The square key is included in the delivery.

For deviating operating conditions please send us a written request stating the fluids, as well as the pressure and temperature range.

Further options for these ball valves are listed on page 48.

DN	PN	DA	s*	L	L1	B	H2	SW1	Weight	Item No.
mm	bar	mm	mm	mm	mm	mm	mm	mm	kg	
20	25	26,9	2,0	1500	715	44	462	16	7,5	076.0144
25	25	33,7	2,3	1500	717	54	465	16	8,0	076.0142

100	25	114,3	3,6	1500	680	171	562	22	34,0	076.0079
125	25	139,7	3,6	1500	665	203	581	22	45,0	076.0096

* The alignment of the wall thickness of the pipe end is carried out according to measurement „s“. The actual wall thicknesses used can be found in the table on page 13 of this catalogue.

Ball Valve with Weld Ends for underground installation

BBF/KSF-V-HE, DN 150-300, PN 25

Full Bore

Standard Materials:

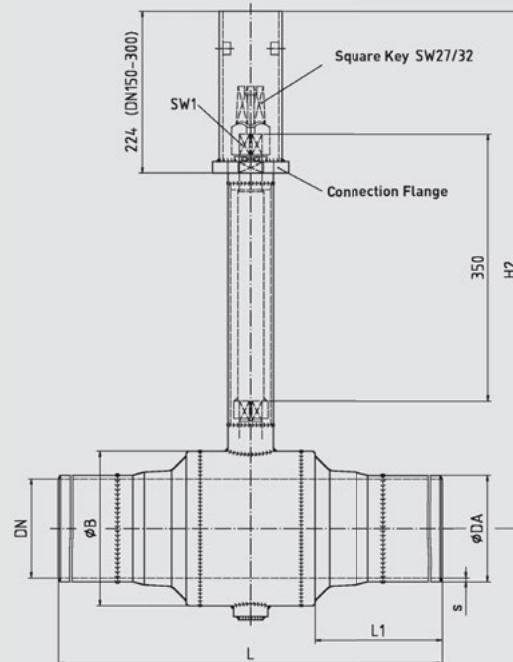

Body:	Forged Steel / Steel
Ball:	Stainless Steel
Stem:	Stainless Steel
Ball seals:	PTFE
Stem seals:	EPDM

Operating Temperature: up to +150 °C

**Ball Valves fulfill the requirements of EN 488
and are suitable for the cold laying method**

Design Features:

- The trunnion mounted ball is standard.
- For the operation of valves DN150 and above we recommend the use of a plug in gear box. The flange connection required for the use of the plug in gear box, as well as the square key is included in the delivery.

For deviating operating conditions please send us a written request stating the fluids, as well as the pressure and temperature range.

Further options for these ball valves are listed on page 48.

Ball Valve with Weld Ends for underground installation

BBF/KSF-V-HE, DN 350-1200, PN 25

Full Bore

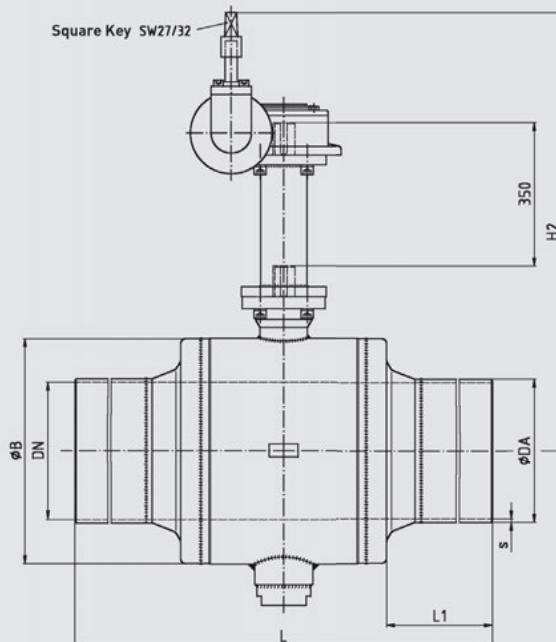

Standard Materials:

Body:	Forged Steel / Steel
Ball:	up to DN 400: Stainless Steel from DN 450: Steel, chemically nickel plated (ENP)
Stem:	Stainless Steel
Ball seals:	PTFE
Stem seals:	EPDM
Operating Temperature:	up to +150 °C

Ball Valves fulfill the requirements of EN 488 and are suitable for the cold laying method

Design Features:

- The trunnion mounted ball is standard.
- The angular gear and the square key are included in the delivery.

For deviating operating conditions please send us a written request stating the fluids, as well as the pressure and temperature range.

Further options for these ball valves are listed on page 48.

Ball Valves DN700 and above will be custom designed to meet order specifications. Please take note of the drawings submitted in case of an order.

* The alignment of the wall thickness of the pipe end is carried out according to measurement „s“. The actual wall thicknesses used can be found in the table on page 13 of this catalogue.

Ball Valve for Venting and Draining with Flange and Weld End, Stainless Steel Design

BBF/ELF/ESF-V-HE, DN25-80, PN25

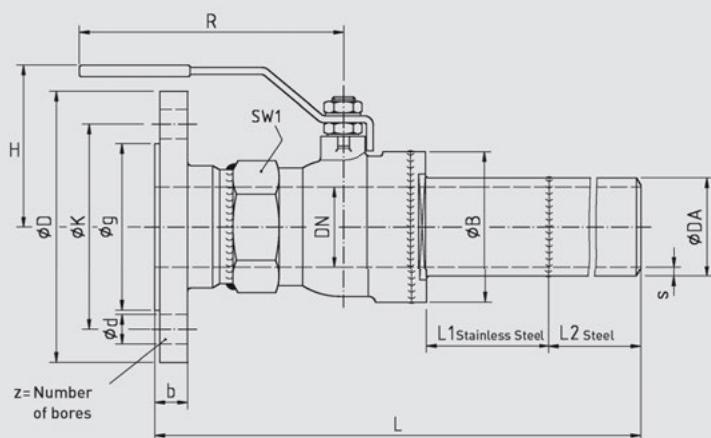

Standard Materials:

Body:	Stainless Steel 1.4581
Weld End:	Steel
Ball:	Stainless Steel
Stem:	Stainless Steel
Ball seals:	PTFE
Stem seals:	EPDM

Operating Temperature: up to +150 °C

Design features:

- Suitable blind flanges and gaskets can be delivered on request.
- Flanges drilled and sized in accordance with EN 1092 – Nominal Pressure PN25

For deviating operating conditions please send us a written request stating the fluids, as well as the pressure and temperature range.

Further options for these ball valves are listed on page 48.

DN	PN	Da	s	L	L1	L2	D	B	H	R	SW1	Weight	Item No.
mm	bar	mm	mm	mm	mm	mm	mm	mm	mm	mm	mm	kg

80 ¹	25	88,9	4,0	1000	250	486	200	140	155	300	---	18,0	050.0198

¹Deviating from the above, the body for this valve is made from stainless steel 1.4571.

Ball Valve for Venting and Draining with Thread and Weld End, Stainless Steel Design

BBF/EMG/ESF-V-HE, DN 25-50, PN 40

Full Bore

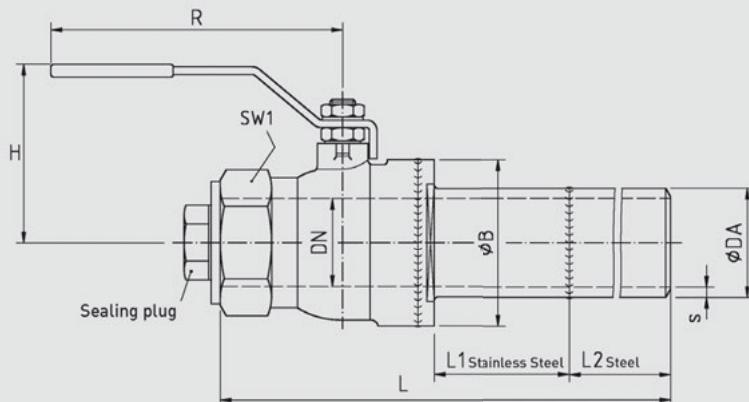

Standard Materials:

Body:	Stainless Steel 1.4581
Weld End:	Steel
Ball:	Stainless Steel
Stem:	Stainless Steel
Ball seals:	PTFE
Stem seals:	EPDM
Sealing plug:	Stainless Steel

Operating Temperature: up to +150 °C

Design features:

- The sealing plug is included in the delivery.

For deviating operating conditions please send us a written request stating the fluids, as well as the pressure and temperature range.

Further options for these ball valves are listed on page 48.

Tie-in Ball Valve / Ball Valve for one time operation

BBF/KSF-V-HE, DN 20-200, PN 25

Full Bore

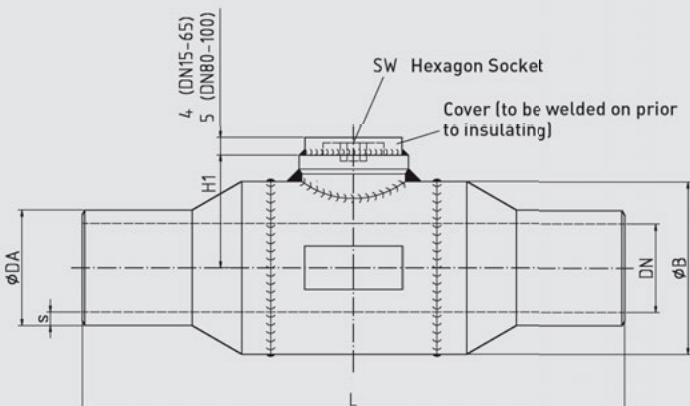

Standard Materials:

Body:	Forged Steel / Steel
Ball:	Stainless Steel
Stem:	Stainless Steel
Ball seals:	PTFE
Stem seals:	EPDM

Operating Temperature: up to +150 °C

Design features:

- Delivery includes a cap for proper weld execution in accordance with "AGFW Arbeitsblatt FW401" (up to DN100). The installation instructions (included in the delivery) must be followed!
- Stem design with double o-ring seals.

For deviating operating conditions please send us a written request stating the fluids, as well as the pressure and temperature range.

Further options for these ball valves are listed on page 48.

¹This ball valve is operated with an external square adapter, a torospherical closure (not included in the delivery) should be welded on.

Tie-in Ball Valve / Ball Valve for one time operation

BBF/KSF-R-HE, DN20-200, PN 25

Reduced Bore

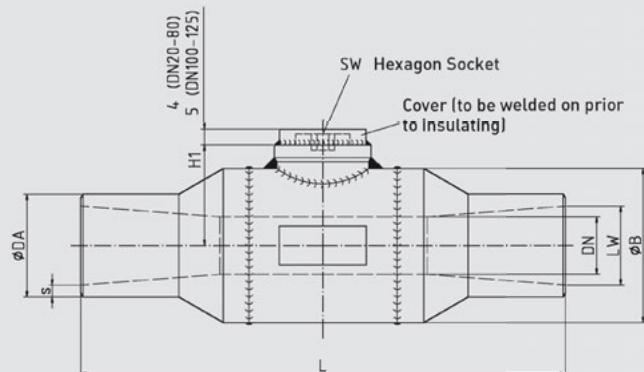

Standard Materials:

Body:	Forged Steel / Steel
Ball:	Stainless Steel
Stem:	Stainless Steel
Ball seals:	PTFE
Stem seals:	EPDM

Operating Temperature: up to +150 °C

Design features:

- Delivery includes a cap for proper weld execution in accordance with "AGFW Arbeitsblatt FW401" (up to DN125). The installation instructions (included in the delivery) must be followed!
- Stem design with double o-ring seals.

For deviating operating conditions please send us a written request stating the fluids, as well as the pressure and temperature range.

Further options for these ball valves are listed on page 48.

Hot Tapping Ball Valve

BBF/KSF-V-HE, DN 20-100, PN25

Full Bore

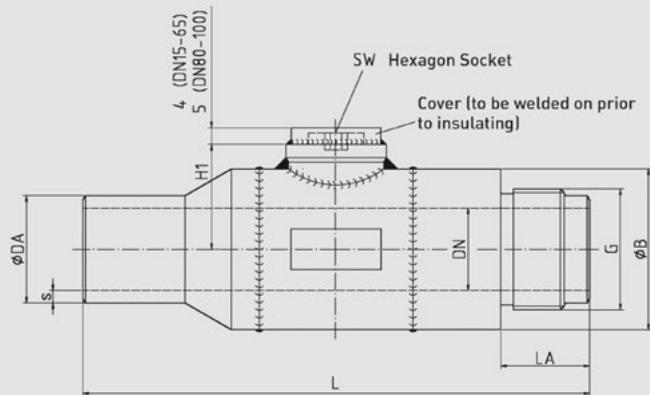

Standard Materials:

Body:	Forged Steel / Steel
Ball:	Stainless Steel
Stem:	Stainless Steel
Ball seals:	PTFE
Stem seals:	EPDM

Operating Temperature: up to +150 °C

Design features:

- Delivery includes a cap for proper weld execution in accordance with "AGFW Arbeitsblatt FW401".
The installation instructions (included in the delivery) must be followed!
- Stem design with double o-ring seals.
- A suitable drilling system can be purchased at www.huetz-baumgarten.de. Further information is available on page 47 of this catalogue.

For deviating operating conditions please send us a written request stating the fluids, as well as the pressure and temperature range.

Larger diameters available on request.

Further options for these ball valves are listed on page 48.

Ball Valve with Weld Ends

BBF/KSF-V-HS, DN 10-200, PN 25

Full Bore

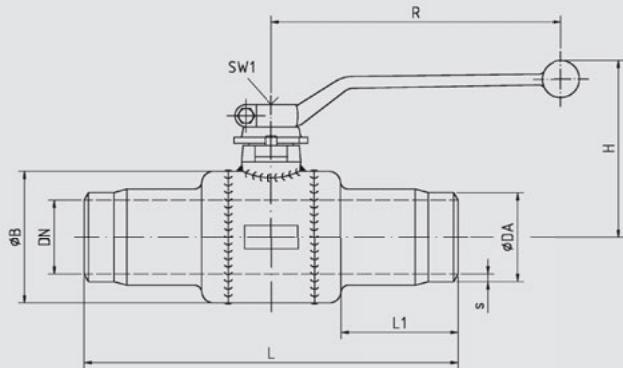

Standard Materials:

Body:	Forged Steel / Steel
Ball:	Stainless Steel
Stem:	Stainless Steel
Ball seals:	PTFE
Stem seals:	EPDM

Operating Temperature: up to +150 °C

Design features:

- From DN125 the trunnion mounted ball is standard.
- From DN150 operation with a gear box is recommended.
Please use the products described on page 29.

For deviating operating conditions please send us a written request stating the fluids, as well as the pressure and temperature range.

Further options for these ball valves are listed on page 48.

BBF/KSF-V-HS, DN 150-1200, PN 25

Full Bore

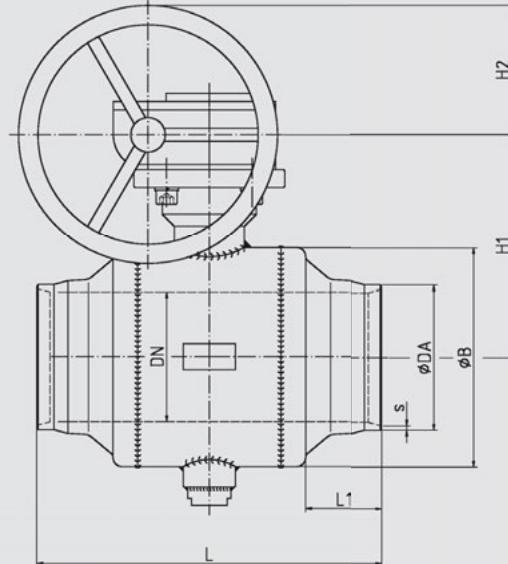

Standard Materials:

Body:	Forged Steel / Steel
Ball:	up to DN 400: Stainless Steel from DN 450: Steel, chemically nickel plated (ENP)
Stem:	Stainless Steel
Ball seals:	PTFE
Stem seals:	EPDM

Operating Temperature: up to +150 °C

Design features:

- The trunnion mounted ball is standard.
- From DN150 we recommend the use of worm gears (or planetary gear units up to max. DN400).
On request the ball valves can be delivered with electric or pneumatic actuators.
- For the valves listed below, the worm gear unit is included in the delivery.

For deviating operating conditions please send us a written request stating the fluids, as well as the pressure and temperature range.

Further options for these ball valves are listed on page 48.

Ball valves DN500 and above will be custom designed to meet order specifications.

Please take note of the drawings submitted in case of an order.

Ball Valve with Weld Ends

BBF/KSF-R-HS, DN 15-250, PN 25

Reduced Bore

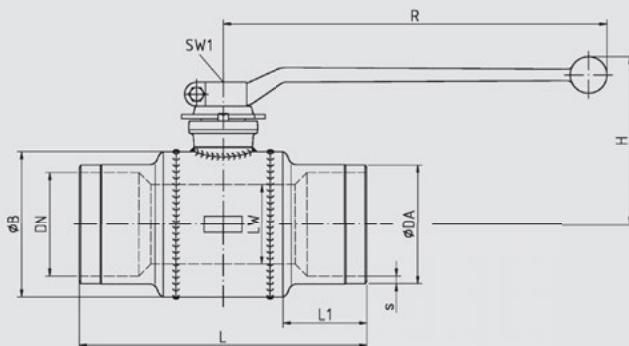

Standard Materials:

Body:	Forged Steel / Steel
Ball:	Stainless Steel
Stem:	Stainless Steel
Ball seals:	PTFE
Stem seals:	EPDM

Operating Temperature: up to +150 °C

Design features:

- From DN150 the trunnion mounted ball is standard.
- From DN200 operation with a gear box is recommended. Please use the products described on page 31.

For deviating operating conditions please send us a written request stating the fluids, as well as the pressure and temperature range.

Further options for these ball valves are listed on page 48.

Please take note of the drawings submitted in case of an order.

Ball Valve with Flanged Ends Short Pattern

BBF/FSK-V-HS, DN32-200, PN25

Full Bore

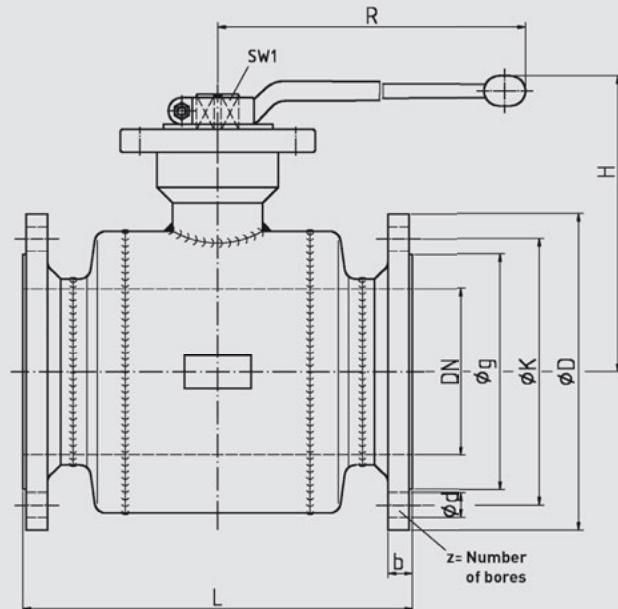

Standard Materials:

Body:	Forged Steel / Steel
Ball:	Stainless Steel
Stem:	Stainless Steel
Ball seals:	PTFE
Stem seals:	EPDM

Operating Temperature: up to +150 °C

Design features:

- From DN125 the trunnion mounted ball is standard.
- From DN150 operation with a gear box is recommended.
Please use the products described on page 33.
- Flanges drilled and sized in accordance with
EN 1092 – Nominal Pressure PN25.

The Measurements of the flanges can be found on page 13 of this catalogue.

For deviating operating conditions please send us a written request stating the fluids, as well as the pressure and temperature range.

Further options for these ball valves are listed on page 48.

Ball Valve with Flanged Ends Short Pattern

BBF/FSK-V-HS, DN 150-1000, PN 25

Standard Materials:

Body:	Forged Steel / Steel
Ball:	up to DN 400: Stainless Steel from DN 450: Steel, chemically nickel plated (ENP)
Stem:	Stainless Steel
Ball seals:	PTFE
Stem seals:	EPDM

Operating Temperature: up to +150 °C

Design features:

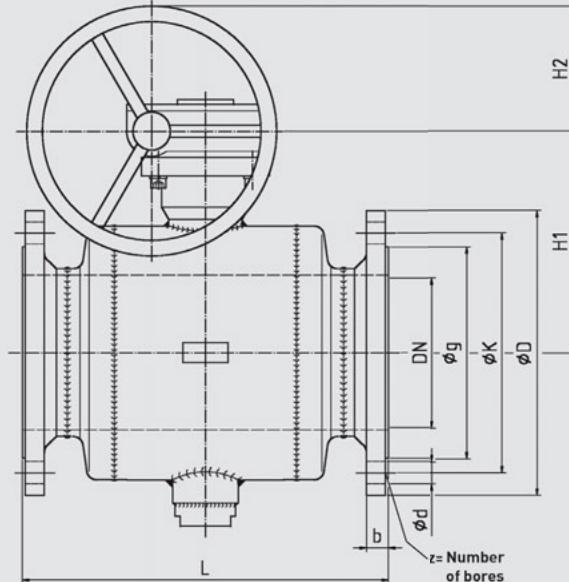

- The trunnion mounted ball is standard.
- From DN150 we recommend the use of worm gears (or planetary gear units up to max. DN400). On request the ball valves can be delivered with electric or pneumatic actuators.
- For the valves listed below, the worm gear unit is included in the delivery.
- Flanges drilled and sized in accordance with EN 1092 – Nominal Pressure PN25.

The Measurements of the flanges can be found on page 13 of this catalogue.

For deviating operating conditions please send us a written request stating the fluids, as well as the pressure and temperature range.

Further options for these ball valves are listed on page 48.

Ball Valve with Flanged Ends Short Pattern

BBF/FSK-R-HS, DN32-250, PN25

Reduced Bore

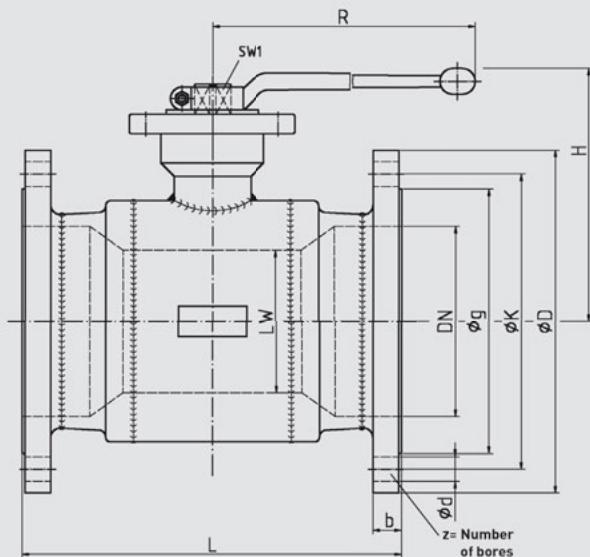

Standard Materials:

Body:	Forged Steel / Steel
Ball:	Stainless Steel
Stem:	Stainless Steel
Ball seals:	PTFE
Stem seals:	EPDM

Operating Temperature: up to +150 °C

Design features:

- From DN150 the trunnion mounted ball is standard.
- From DN200 operation with a gear box is recommended.
Please use the products described on page 35.
- Flanges drilled and sized in accordance with
EN 1092 – Nominal Pressure PN25.

The Measurements of the flanges can be found on page 13 of this catalogue.

For deviating operating conditions please send us a written request stating the fluids, as well as the pressure and temperature range.

Further options for these ball valves are listed on page 48.

Ball Valve with Flanged Ends Short Pattern

BBF/FSK-R-HS, DN 200-1000, PN 25

Reduced Bore

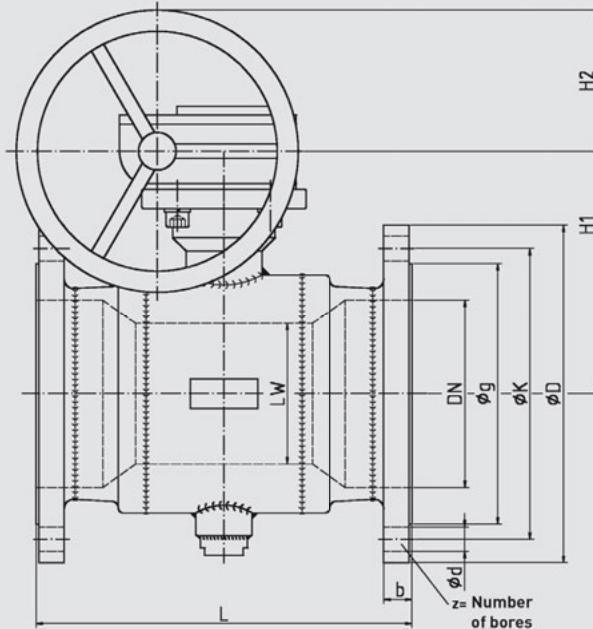

Design features:

- The trunnion mounted ball is standard.
- From DN200 we recommend the use of worm gears (or planetary gear units up to max. DN500). On request the ball valves can be delivered with electric or pneumatic actuators.
- For the valves listed below, the worm gear unit is included in the delivery.
- Flanges drilled and sized in accordance with EN 1092 – Nominal Pressure PN25.

Standard Materials:

Body:	Forged Steel / Steel
Ball:	up to DN 500: Stainless Steel from DN 600: Steel, chemically nickel plated (ENP)
Stem:	Stainless Steel
Ball seals:	PTFE
Stem seals:	EPDM

Operating Temperature: up to +150 °C

The Measurements of the flanges can be found on page 13 of this catalogue.

For deviating operating conditions please send us a written request stating the fluids, as well as the pressure and temperature range.

Further options for these ball valves are listed on page 48.

Ball Valve for Venting and Draining with Flange and Weld End

BBF/FSL/KSF-V-HS | BBF/FSK/KSF-V-HS, DN 15-150, PN 25

Standard Materials:

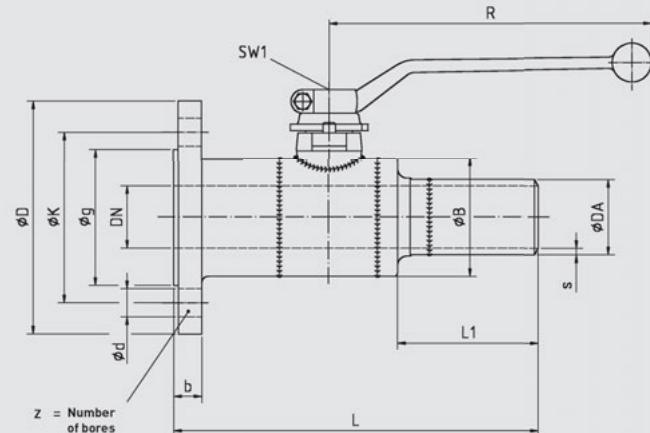

Body:	Forged Steel / Steel
Ball:	Stainless Steel
Stem:	Stainless Steel
Ball seals:	PTFE
Stem seals:	EPDM

Operating Temperature: up to +150 °C

Full Bore

Design features:

- From DN125 the trunnion mounted ball is standard.
- Suitable blind flanges and gaskets can be delivered on request.
- Flanges drilled and sized in accordance with EN 1092 – Nominal Pressure PN25.

The Measurements of the flanges can be found on page 13 of this catalogue.

For deviating operating conditions please send us a written request stating the fluids, as well as the pressure and temperature range.

Further options for these ball valves are listed on page 48.

BÖHMER

Our Experience – Your Safety

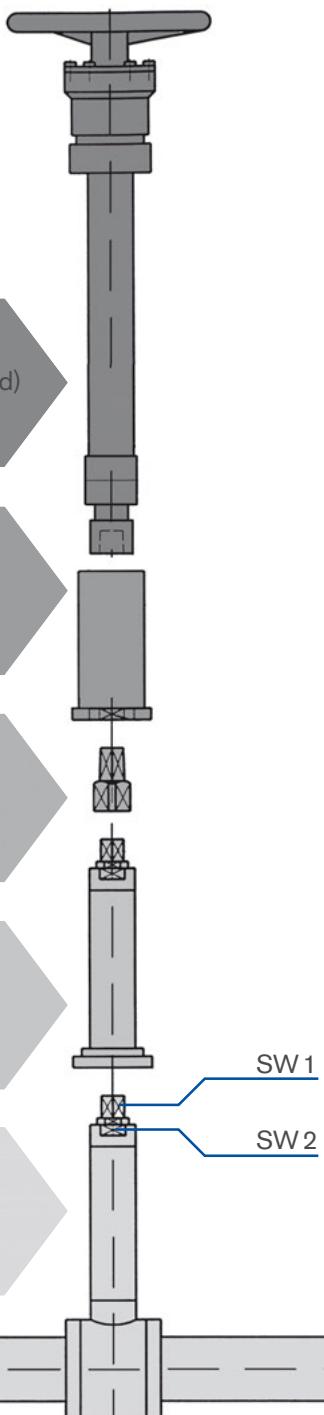

OPTIONS & ACCESSORIES

OPERATING ACCESSORIES FOR BALL VALVES FOR UNDERGROUND INSTALLATION

The accessories for Böhmer ball valves for underground installation are of modular design.

These accessories can only be assembled in one position. The two-flat connector serves as the base for additional extensions and attachable flanges and is always parallel to the axis of the pipeline. Thanks also to the notch for the alignment pin in the square adapter, the position of the ball in every Böhmer ball valve for underground installation is always clearly visible on the top of the valve.

Plug-in gear unit

with 800 mm extension (standard)
Gear ratio 17:1

Attachable flange

Standard lengths 200 mm and
500 mm

Square key

SW 27/32

Additional extensions

Standard lengths 350 mm, 500
mm, 750 mm and 1.000 mm

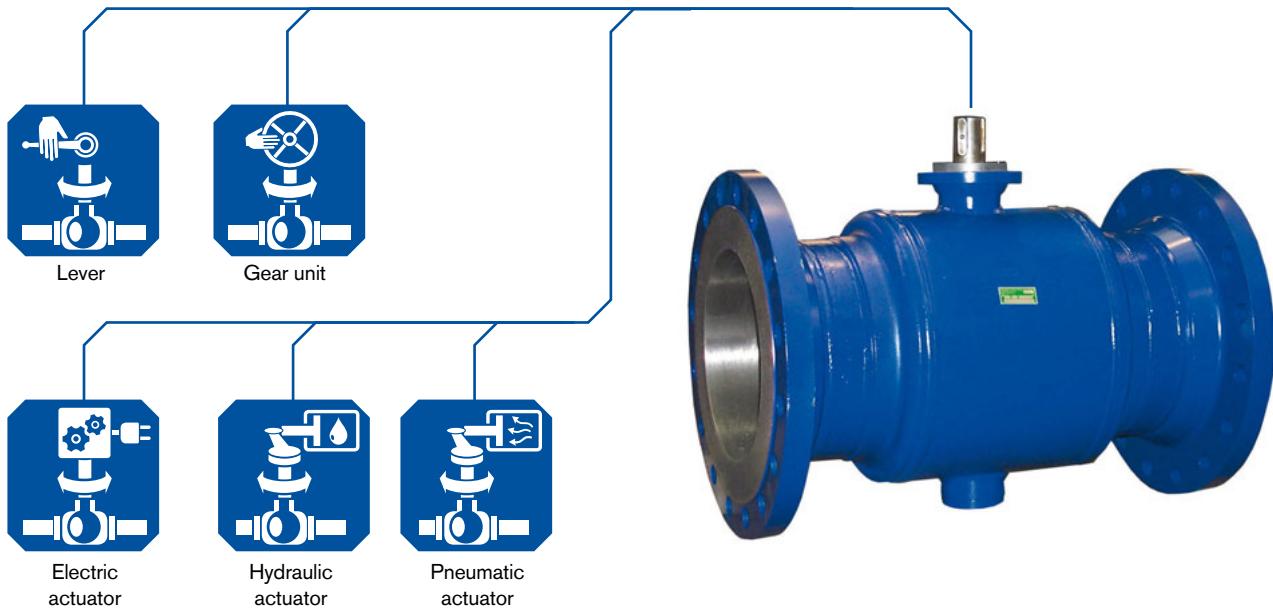

Ball Valve

You can find standard models
on pages 16 to 21.

ACTUATORS FOR BÖHMER DISTRICT HEATING BALL VALVES

Ball valves with screwed-on planetary gears

This ball valve actuator is distinguished by its compact design. Due to its minimal space requirement this model is perfectly suitable for demanding installation positions.

Ball valves with worm gears

An economical solution for actuating large ball valves. You can find the available standard models on pages 29, 31, 33 and 35 in this catalogue.

Pneumatic, hydraulic and electric ball valve actuators

BÖHMER ball valves can be combined with actuators made by all established actuator manufacturers. We look forward to receiving your technical inquiries.

Permissible tensile and compressive forces for BÖHMER ball valves

The permissible tensile and compressive forces in the adjacent table correspond to the figures required by EN 488. The permissible tensile and compression forces listed here are valid for all fully-welded BÖHMER district heating ball valves.

Ball valves for greater forces are also available on written request.

Drag coefficients for BÖHMER ball valves

The drag coefficients were determined for ball valves with solid balls.

Hollow balls cause more resistance and thus result in higher drag coefficients. In order to determine the exact losses, it is necessary to distinguish between trunnion-mounted and floating hollow balls.

Since the use of trunnion-mounted balls depends partly on the operating pressure, it is not possible to determine generally-valid drag coefficients for hollow balls as a function of nominal sizes.

The following are drag coefficients of butterfly valves based on approximate figures according to Dubbel:

DN 50: $\zeta = 1.4$ Kv=85

DN 200: $\zeta = 0.8$ Kv=1.790

DN 500: $\zeta = 0.63$ Kv=12.613

ζ Drag coefficient [-]

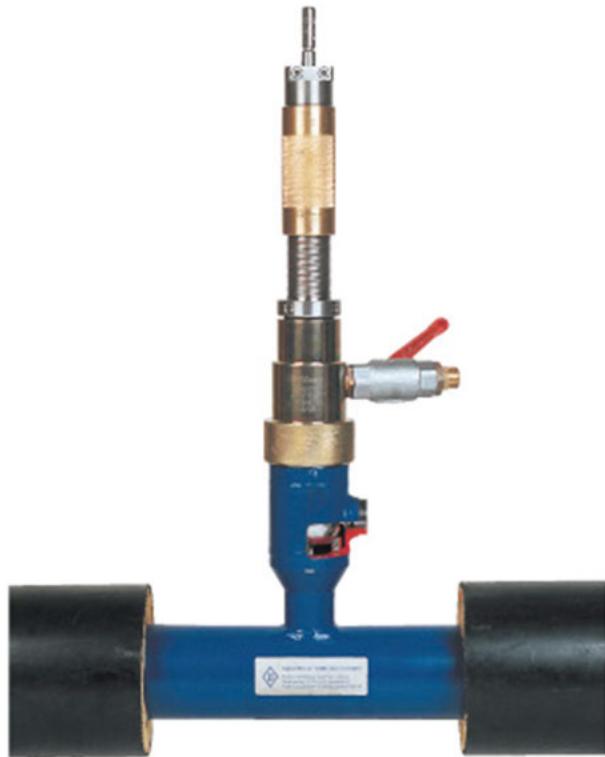

Kv Volume flow rate (m³/h) water (15°C) with 1 bar loss of pressure

DN Nominal size [mm]

LW Clear diameter [mm]

DRILLING SYSTEM FOR BÖHMER DISTRICT HEATING BALL VALVES

**BÖHMER and Hütz+Baumgarten –
A strong partnership for maximum
security when drilling ball valves
into district heating pipelines.**

Drilling system for BÖHMER district heating ball valves from DN 20 to DN 100.

This drilling system is optimally suited to our district heating ball valves and provides convincing proof of its absolute operational safety. This system is part of the professional production program of Hütz+Baumgarten.

The TÜV has tested the safety of this system and confirmed it by issuing type approval.

The drilling device is used to drill pipelines with a drilling dimension of up to DN 100 for BÖHMER district heating ball valves.

- type approval TÜV A 297-13
- for screwing on, including seals
- for bore diameters from 17 mm up to 95 mm
- for smooth boring rods with 13 mm diameter and 11 mm external square
- maximum operating pressure = 20 bar
- maximum operating temperature = 200°C
- for manual and motor actuation

Stem extensions												
Variable stem extensions for underground installation ²	×											
Stem extension 60 mm or 100 mm						×	×	×	×	×	×	×
Control and drain connectors												
Adapter pipes for drain and vent ball valves	×											
Control connector for DN150 and larger (with plug or ball valve)						×	×	×				
Other options:												
Greater wall thicknesses for extreme axial stresses or allowance for corrosion	×											
Design with flange / weld end for diameters \geq DN125					×							
Design for steam	×			×	×	×	×	×			×	

¹Variable lengths for underground installation:

The lengths indicated in the catalogue are standard lengths. Other lengths can be delivered on request as custom lengths.

²Variable stem lengths for underground installation:

The 350 mm height of the upper flange indicated in the catalogue is the standard length.

Other heights of 500 mm, 750 mm and 1000 mm can also be manufactured.

We recommend that differences in height be compensated by additional extensions shown in our list of accessories on page 44.

FURTHER DESIGNS OF BALL VALVES AND ACTUATORS

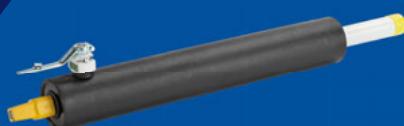

Ball valve with insulation
Flange and weld end up to DN 200

Ball valve with stem extension
Standard 60 and 100 mm
DN 10-250

Drain ball valve
Special surface coating for outdoor service

Ball valve for venting and draining
Made of steel, fully insulated

More than 100,000 different kinds of ball valves in our total program

Ball valve for installation in shafts
with mounted planetary gear

Ball valves for insulation in shafts
with drain and vent connectors

Ball valve for installation in shafts
with electric actuator

Ball valve for underground installation
with adapter for mountable T-key

BÖHMER BALL VALVES IN OPERATION

We keep in step with time!

Thanks to our comprehensive product line, we are already able to fulfill almost every customer demand.

But we do not rest on our laurels!

In order to be able to satisfy all customers' wishes in the future, our highly qualified engineers and designers take meticulous care to develop the next generations of ball valves. As a result, we develop innovative solutions which are successful in fields such as district heating, the gas industry, pipeline construction, hydraulics, pneumatics, plant engineering and construction, chemicals, petrochemicals and subsea applications.

District heating

Oil, gas, petrochemicals

Shipbuilding

Power plants

As one of the world's leading manufacturers of ball valves, we are always conscious of our responsibilities to our customers.

Now and in the future, the name BÖHMER will continue to be a distinguished synonym for our comprehensive promise to perform.
